

EMBRACE

DISCRIPTION

“Embrace” aims to combine the decoration and storage functions to reduce the use of space. We squeeze the top of the bed inward to form an arc-shaped surface, contrasted with the folds made by handcrafts on the inner side, forming a staggering sense of high quality. The bed has an atmosphere light that adds to the inner side. There is also a small platform inside, where the platform can place the user’s personal belongings or ornaments to increase the decoration.

The “Embrace”bed is inspired by the contrast between inside and outside in nature. Life in nature has a protective shell and a soft heart. We hope to make this bed a feeling that allows users to take off their guards after entering the bedroom. It is as if the user peels off the hard shell and lie on a comfortable bed to enjoy the warm and beautiful night.

EDA22-112

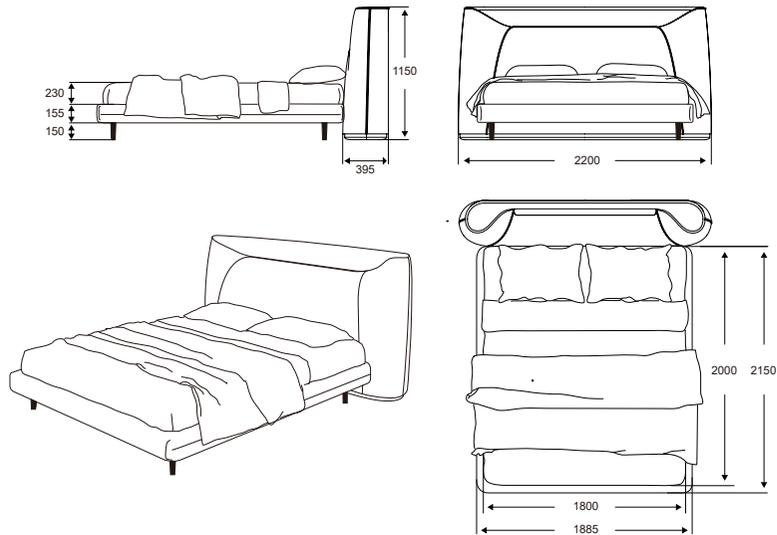

FUNCTIONAL

The led light comes out from the inner part of the top of the backboard, which will emphasize the inner layer of the crinkle silk fabric texture, which shows the craftsmanship of material combination. The soft light will make an elegant look for both the bed and the environment at night.

FEATURE

The squeezed feature of the fabric creates a beautiful continuous edge on the top of the headboard, and the front edge is pressed and fixed by a decorative metal sheet. There are two spaces for users to put some objects at the left and right corners, such as magazines, aroma, and alarms. The design brings users the functional minimalism features to achieve both in aesthetic and storage.
